

Machine Learning is a subset of Artificial Intelligence that enables computers to learn from data.

Deep Learning is a branch of Machine Learning based on neural networks.

Python is one of the most popular programming languages for AI and Machine Learning.

ChromaDB is a vector database used to store embeddings and perform similarity search.

Ollama allows developers to run Large Language Models locally without using cloud APIs.

Retrieval-Augmented Generation (RAG) combines vector search with Large Language Models to provide accurate answers from documents.
